FAP PORTABLE AGITATOR

APPLICATION

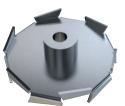

- FAP series agitators are vertical direct motor-driven agitators with clamp.
- High-speed agitation is used in the food processing, cosmetics, pharmaceutical or chemical industries.

WORKING PRINCIPLE

- These agitators are fixed to the wall of the tank by means of a clamp
- Thanks to the joint, they can be inclined to the use position.
- The rotation of the propeller makes the fluid flow to do bottom of the tank and then up to the surface of the fluid along the tank wall opposite to the wall to wich the agitator is fitted.
- This effect is promoted if the bottom of the tank is curved.

OPTIONS

- Motor cover
- Atex motor
- Motors: 1000 rpm or 1500 rpm
